

# Wrapping products in a more efficient manner

## also Ideal for small businesses...

First-class quality wrapping and packaging machines with innovations in standard format or special design features – safe and user-friendly due to “smart display” – “Made in Germany” by BVM Brunner.

3G The new generation of a fully-automatic packaging line.

Perfection in packaging technology for professional high end companies or start up mail order businesses

Efficient and cost-saving packaging in the e-commerce for shipping and return goods.

The **BVM Wrapping system** “Comtex 3G” wraps products with a variety of dimensions fully-automatically without adjustment. The results are an overall tight film bag providing the ideal customer experience.

The **BVM mail order system** “Comtex 3G” machine is the complete solution for the mailing of many articles in film bags directly to the customer which includes delivery note insertion, invoice and goods which are packed in an overall tight film bag and then can be applied with an address label and delivered directly to the corresponding logistics partner prior to shipping to the customer.

On the **BVM returns system** “Comtex 3G” returned products can be packed in a cost-saving film where articles can then be placed back in store wrapped original specification.

Mailing in film bags offers the benefits of

- **Wrapping clients products with a clear film optics.**
- **Client address data as well as different shippers can be shown on the label.**

**I.E. In large laundries where shrinking wrapping is not required the tight PE film bag offers adequate protection for external mailing transportation**

Almost 100 Comtex systems have been successfully delivered worldwide to leading mail order companies.

With mail order wrapping on a BVM packaging line the following can be saved:

- **Cardboard**
- **Expensive work areas**
- **Stock levels lowered**
- **Less packing material**
- **Overall material costs**
- **Productivity**

Simple menu information via smart display unit.

Intuitive menu and machine control via touch screen.

Capacity increase on the side sealing station with production capacities up to 1800 products per hour (patent-registered).
